A small studio building software for everyday life.

Privacy-first apps and fast, hand-written websites for small businesses.

Veyago Inc. is an independent New York software studio founded by Cassian Drefke in April 2026. The two-person studio builds privacy-first apps and fast, hand-written websites for small businesses. Kept is available on the App Store; Veyago travel is in development for a planned Q4 2026 launch.

Kept puts the next deadline first.

Kept helps people organise warranties, documents, subscriptions, and expiry dates, with reminders before anything lapses. Available on the App Store, it requires no account and stores data on the device. It is free to download, with a \$29.99 one-time unlock.

FOR THE RECORD

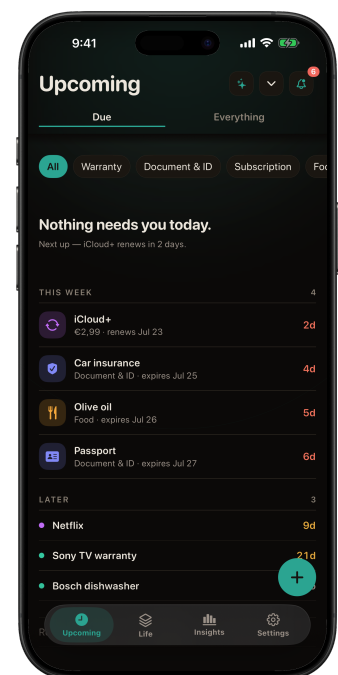

Kept is available now. Veyago travel is a separate product in development.

The journey starts with choosing where to go.

A travel app in development for people planning alone or deciding together.

Veyago travel is being built to help people decide where to go, alone or together. Its Bracket narrows up to 80 destinations to one choice through four rounds. Planned features include group sessions, AI-generated itineraries, and a wellbeing layer. The app is in development for iOS and Android, with launch planned for Q4 2026.

A decision before an itinerary.

The Bracket is the starting point: compare destinations, narrow the choices, and arrive at one shared answer. The planned itinerary and wellbeing features build on that decision.

FOR THE RECORD

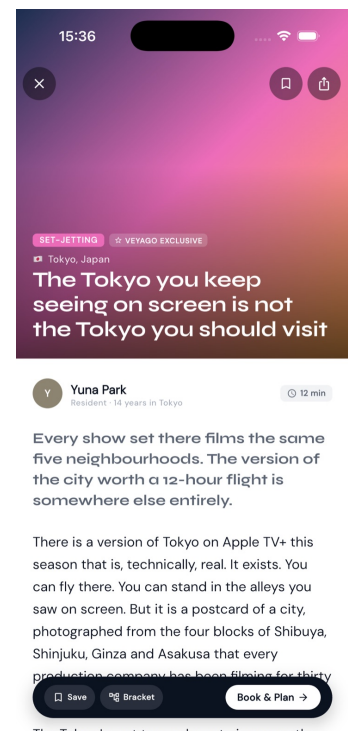

Launch is planned for Q4 2026. These images show a product in development; features and timing may change.
